# 1. Executive Summary

This document evaluates hosting options for deploying private NexusFinance instances for individual clients. Each client receives an isolated deployment with their own database, frontend, and backend — ensuring data separation and customization.

## Key Finding

A single VPS can host 10-20 small-to-medium clients running the NexusFinance stack (Node.js backend + Supabase/PostgreSQL). The most cost-effective option is Hostinger KVM 2 at \$8.99/month per VPS, yielding \$0.45-0.90 per client per month.

# 2. NexusFinance Resource Requirements

Based on the current NexusFinance stack, each client deployment requires:

| Resource  | Minimum      | Recommended  | Notes                                     |
|-----------|--------------|--------------|-------------------------------------------|
| vCPU      | 1 core       | 2 cores      | Node.js + PostgreSQL run on same VPS      |
| RAM       | 1 GB         | 2 GB         | 512MB for Node.js, 512MB for PostgreSQL   |
| Storage   | 10 GB        | 20 GB        | OS + app + database + backups             |
| Bandwidth | 500 GB       | 1 TB         | API calls + static assets + notifications |
| OS        | Ubuntu 22.04 | Ubuntu 24.04 | LTS for security updates                  |

## Architecture Note

NexusFinance uses a monolithic Node.js backend. For per-client isolation, each client gets their own VPS with both the backend and database running locally. Supabase is replaced with a local PostgreSQL instance.

## 2.1 What's Included Per Client

- Dedicated VPS with Node.js backend + PostgreSQL database
- Custom domain (e.g., client.nexusfinance.com)
- Free SSL via Let's Encrypt (auto-renewal)
- Daily automated backups (7-day retention)
- Telegram bot integration (shared bot, separate chat IDs)

- SMS OTP via Twilio (shared account, per-message billing)
- Email notifications via Brevo (shared account)

### 3. Hosting Provider Comparison

Five hosting providers are evaluated based on price, performance, and suitability for running a Node.js + PostgreSQL stack.

#### 3.1 Pricing Overview

| Provider     | Plan        | vCPU   | RAM    | Storage     | Bandwidth | Monthly | Yearly   |
|--------------|-------------|--------|--------|-------------|-----------|---------|----------|
| Hostinger    | KVM 2       | 2      | 8 GB   | 100 GB NVMe | 8 TB      | \$8.99  | \$107.88 |
| Vultr        | HP 1GB      | 1      | 1 GB   | 25 GB NVMe  | 2 TB      | \$6.00  | \$72.00  |
| DigitalOcean | Basic 2vCPU | 2      | 4 GB   | 80 GB SSD   | 4 TB      | \$24.00 | \$288.00 |
| Railway      | Hobby       | Shared | 512 MB | Volume      | 100 GB    | \$5.00* | \$60.00* |
| Render       | Starter     | 0.5    | 512 MB | Persistent  | 5 GB      | \$7.00  | \$84.00  |

\* Railway and Render are usage-based; actual costs vary by traffic.

## 3.2 Feature Comparison

| Feature      | Hostinger          | Vultr          | DigitalOcean   | Railway        | Render     |
|--------------|--------------------|----------------|----------------|----------------|------------|
| Managed DB   | No                 | No             | Yes (\$15+)    | Yes            | Yes (\$7+) |
| Auto-scaling | No                 | No             | Yes            | Yes            | Yes        |
| Backups      | Weekly free        | Paid add-on    | 20% extra      | Included       | Included   |
| SSL          | Free Let's Encrypt | Self-configure | Self-configure | Auto           | Auto       |
| Support      | 24/7 chat          | Ticket only    | Ticket only    | Discord        | Email      |
| Regions      | Global             | 32 regions     | 15 regions     | US (expanding) | US/EU/SG   |
| Uptime SLA   | 99.9%              | 100%           | 99.99%         | 99.5%          | 99.9%      |
| Root access  | Yes                | Yes            | Yes            | No             | No         |

## 3.3 Cost-Per-Spec Analysis

| Provider     | Price/GB RAM | Price/vCPU | Best Value Tier                       |
|--------------|--------------|------------|---------------------------------------|
| Hostinger    | \$1.12       | \$4.50     | KVM 2 — best overall value            |
| Vultr        | \$6.00       | \$6.00     | HP 1GB — good for single clients      |
| DigitalOcean | \$6.00       | \$12.00    | Basic 2vCPU — ecosystem premium       |
| Railway      | ~\$10.00     | N/A        | Usage-based, hard to compare directly |
| Render       | \$14.00      | \$14.00    | Starter — simplest setup              |

## 4. Per-Client Cost Model

Assuming each VPS hosts 10-20 clients (shared backend, separate database schemas):

### 4.1 Shared Resource Assumption

| Scenario     | Clients/VPS | VPS Plan                  | Monthly Cost | Cost/Client |
|--------------|-------------|---------------------------|--------------|-------------|
| Conservative | 10          | Hostinger KVM 2 (\$8.99)  | \$8.99       | \$0.90      |
| Moderate     | 15          | Hostinger KVM 2 (\$8.99)  | \$8.99       | \$0.60      |
| Aggressive   | 20          | Hostinger KVM 2 (\$8.99)  | \$8.99       | \$0.45      |
| Premium      | 10          | DigitalOcean 2vCPU (\$24) | \$24.00      | \$2.40      |
| Premium+     | 15          | DigitalOcean 2vCPU (\$24) | \$24.00      | \$1.60      |

#### Why 10-20 clients per VPS?

NexusFinance is a lightweight Node.js app. With 2GB RAM, the backend uses ~200MB, PostgreSQL ~300MB, leaving 1.5GB for OS and headroom. Each additional client adds ~50MB for their database schema. At 20 clients, total DB usage is ~1GB, well within limits.

### 4.2 Additional Per-Client Costs

| Item            | Cost     | Frequency | Notes                         |
|-----------------|----------|-----------|-------------------------------|
| Domain name     | \$10-15  | Per year  | client-domain.com             |
| SSL certificate | \$0      | Free      | Let's Encrypt auto-renewal    |
| Backup storage  | \$0-2    | Per month | Included or low-cost add-on   |
| Twilio SMS      | \$0.0105 | Per OTP   | Shared across clients         |
| Brevo email     | \$0      | Free tier | 300 emails/day free           |
| Monitoring      | \$0-5    | Per month | UptimeRobot free tier or paid |

## 5. Scaling Scenarios

Projected costs as the client base grows:

### 5.1 Cost Projection Table

| Clients | VPS Needed | VPS Cost/Mo | SMS/Mo  | Total/Mo | Total/Year |
|---------|------------|-------------|---------|----------|------------|
| 10      | 1          | \$8.99      | \$1.05  | \$10.04  | \$120.48   |
| 20      | 1          | \$8.99      | \$2.10  | \$11.09  | \$133.08   |
| 50      | 3          | \$26.97     | \$5.25  | \$32.22  | \$386.64   |
| 100     | 5          | \$44.95     | \$10.50 | \$55.45  | \$665.40   |
| 200     | 10         | \$89.90     | \$21.00 | \$110.90 | \$1,330.80 |
| 500     | 25         | \$224.75    | \$52.50 | \$277.25 | \$3,327.00 |

\* Assumes 100 OTPs per client per month.

### 5.2 Cost Per Client At Scale

| Clients | Total Monthly | Cost Per Client/Mo | Cost Per Client/Year |
|---------|---------------|--------------------|----------------------|
| 10      | \$10.04       | \$1.00             | \$12.05              |
| 20      | \$11.09       | \$0.55             | \$6.65               |
| 50      | \$32.22       | \$0.64             | \$7.73               |
| 100     | \$55.45       | \$0.55             | \$6.65               |
| 200     | \$110.90      | \$0.55             | \$6.65               |
| 500     | \$277.25      | \$0.55             | \$6.65               |

#### Economy of Scale

At 20+ clients, the cost per client drops below \$0.60/month — SMS costs become the primary variable expense. The VPS model becomes increasingly efficient as you scale.

## 6. Total Cost of Ownership

---

Full TCO breakdown for a 50-client deployment (Year 1):

| Category      | Item                          | Monthly | Yearly     |
|---------------|-------------------------------|---------|------------|
| Compute       | 3x Hostinger KVM 2 VPS        | \$26.97 | \$323.64   |
| Domains       | 50 client domains             | \$4.17  | \$50.00    |
| Monitoring    | UptimeRobot Pro               | \$5.00  | \$60.00    |
| Backups       | Off-site backup storage       | \$5.00  | \$60.00    |
| SMS (Twilio)  | 500 OTPs/month                | \$5.25  | \$63.00    |
| Email (Brevo) | Transactional emails          | \$0     | \$0        |
| SSL           | Let's Encrypt                 | \$0     | \$0        |
| Labor         | Server maintenance (5 hrs/mo) | \$50.00 | \$600.00   |
|               |                               |         |            |
| TOTAL         |                               | \$96.39 | \$1,156.64 |

**Cost per client: \$1.93/month or \$23.13/year (including labor).**

## 7. Recommendation

| Criterion       | Recommendation  | Rationale                                         |
|-----------------|-----------------|---------------------------------------------------|
| Best Value      | Hostinger KVM 2 | \$8.99/mo, 8GB RAM, 100GB NVMe — best specs/price |
| Easiest Setup   | Hostinger KVM 2 | hPanel control panel, 24/7 support                |
| Best Ecosystem  | DigitalOcean    | Managed databases, one-click apps                 |
| Simplest (PaaS) | Render          | Zero server management, auto-deploys              |
| Most Flexible   | Railway         | Usage-based billing, pay for what you use         |

### Final Recommendation

For NexusFinance per-client hosting, Hostinger KVM 2 is the recommended choice. At \$8.99/month for 2 vCPUs, 8GB RAM, and 100GB NVMe storage, it delivers the best price-to-performance ratio. A single VPS can comfortably host 10-20 clients at a cost of \$0.45-0.90 per client per month.
